

Internship Business Development / Market Analysis
(50% to 100%, duration: 3 to 6 months, start: immediately)

About us:

Resmonics is a digital health startup that strives to put patients in control of their chronic respiratory disease with unprecedented ease and convenience. Our mission is to develop monitoring solutions that are compatible with patients' everyday lives. Our first product, **Asthma Guardian**, turns a patient's smartphone into a guardian angel at night that protects them from life-threatening asthma attacks. The technology behind Asthma Guardian, namely deep learning based digital biomarkers, has been developed and clinically validated in five years of research at leading Swiss universities and healthcare providers.

Your challenge and opportunity:

In your internship, you will work closely with the CEO of the startup. You will get first hand insights into the digital health market and learn about the latest technological breakthroughs in artificial intelligence for healthcare. During your internship, we will enable you to develop an understanding of our technology and the digital health market in general. You will support us in the following tasks:

- Create a competitive landscape analysis
- Identify and assess potential international customers
- Update financial projections based on your market analysis
- Validate the business model in expert interviews
- Develop potential go-to market strategies for Asia

Your profile:

If you apply for this position, we expect you to embrace our core value, which is to develop innovative technology to improve patients' everyday lives. Ideally, the following list describes your profile:

- Entrepreneurial way of thinking
- Interest in digital health and health technology
- Independent working style
- Excellent communication and presentation skills in English and in German
- Proficiency in MS Office (Word, PowerPoint, and Excel)
- A relevant university degree (e.g., business, technology management, entrepreneurship)
- Willing and able to work in Zurich

What you can expect:

We are a small team of dedicated founders who strive to challenge the status quo in self-management of chronic respiratory diseases. As an intern, you will get unique insights and work on challenging tasks independently, which will allow you to build up expertise in one of fastest growing industries. A steep learning curve is guaranteed. We pay interns according to startup standards and the intern's skill set and prior experience. A successful internship facilitates future employment with the company.

Are you interested in working with us to create value for patients?

We would love to get to know you!
