

**Product manager**  
(100%, start: November)

**About us:**

**Resmonics** is a digital health startup that strives to put patients in control of their chronic respiratory disease with unprecedented ease and convenience. Our mission is to develop monitoring solutions that are compatible with patients' everyday lives. Our first product, **Asthma Guardian**, turns a patient's smartphone into a guardian angel at night that protects them from life-threatening asthma attacks. The technology behind Asthma Guardian, namely deep learning based digital biomarkers, has been developed and clinically validated in five years of research at leading Swiss universities and healthcare providers.

**Your challenge and opportunity:**

You will be responsible for our product **Asthma Guardian**, which we offer as a Software Development Kit for other companies to integrate into their smartphone applications. You will work closely with the CEO and CTO of the startup. We expect you to:

- Shape our product strategy by defining user, market, and product requirements
- Be responsible for the medical (CE) certification of our product (focus topics: risk and software lifecycle management)
- Understand the technology behind our product, support our CTO with code reviews
- Align implementation and rollout timelines
- Obtain and implement customer feedback

**Your profile:**

If you apply for this position, we expect you to embrace our core value, which is to develop innovative technology to improve patients' everyday lives. Ideally, the following list describes your profile:

- Entrepreneurial, cognitively flexible, and team-oriented way of thinking
- Great organizational skills and a reliable and accurate working style
- Good communication and presentation skills in English and in German
- Experience in software development, preferably in mobile development
- Ideally prior experience with IEC 62304 and ISO 14971 (not mandatory)
- A university degree in a STEM subject
- Willing and able to work in Zurich

**What you can expect:**

We are a small team of dedicated founders who strive to challenge the status quo in self-management of chronic respiratory diseases. As one of our first employees, you will quickly become the expert and decision maker in your field of responsibility within the company. Thus, you can look forward to a high degree of impact, independence, and responsibility in a startup that is part of one of the fastest growing industries. A steep learning curve is guaranteed. We pay fair salaries with stock options according to your prior experience and skill set.

**Are you interested in working with us to create value for patients?**

We would love to get to know you!

Please send your CV, letter of motivation, and/or questions regarding the position to:
